

Codex wins Engineering Emmy® for its Recording Platform and Capture Media

Codex is to be honored with Engineering Emmy® Award for outstanding achievement in engineering development.

The Television Academy announced the recipients of the 70th Engineering Emmy® Awards. Codex is pleased to be recognized with the most prestigious television accolade for outstanding achievement in engineering development for its Codex Recording Platform and Capture Media. The Television Academy’s Engineering Emmys are presented to individuals, companies, or organizations for engineering developments that considerably improve existing methods or innovations that materially affect the transmission, recording, or reception of television.

The Television Academy’s award citation reads, “The Codex Recording Platform and Capture Media has completely addressed the issue of providing a recording solution for digital cameras without sacrifice in quality or performance, while improving on the speed and efficiency of the workflow. Codex allows digital storytellers to capture all the detail required to produce the highest quality end product, and in doing so, has proven itself to be an essential industry game-changer.”

Marc Dando, Managing Director of Codex, comments: “This prestigious award especially recognizes the hard work of Delwyn Holroyd and the CODEX engineering team, who started well over a decade ago with the Codex Studio recorder and Virtual File System, which was one of the first file based workflows. When Codex noted that digital cinematography for Television was being hampered by cumbersome and non-standard methods of capture, that tethered the cameras to large and unreliable storage appliances that lacked the suitable bandwidth and robustness, we developed the Codex Capture Drives and embedded them and the recorder into the cameras to produce the solid-state digital equivalent of film camera magazines. We are very grateful for this very special acknowledgement of the Television Academy.”

The Codex Recording Platform and Capture Media was introduced in 2005 and was immediately adopted as the recording medium of choice for uncompressed RAW capture of choice for television and feature production. Some notable Television shows “Captured on Codex” include recent 2018 Emmy winner; GAME OF THRONES, and past Emmy winner GAME CHANGE, including other award winning shows BONES, LIMITLESS, PENNY DREADFUL, and currently playing on NETFLIX; ALTERED CARBON, THE OA, OZARK, GYPSY, THE RITUAL, DEATH NOTE, BRIGHT, OKJA, BETTER CALL SAUL.

The award will be presented to Codex at the Engineering Emmy Awards ceremony on Wednesday, October 24, 2018, being held at the JW Marriott, Los Angeles L. A. LIVE hotel.
